STATISTICS WITH CONFIDENCE
— Confidence intervals and statistical guidelines

Many medical journals, including the British Medical Journal now expect scientific papers submitted to them to contain confidence intervals when appropriate. Why? what are they? and how do you calculate them? Statistics with Confidence tells you. A clear explanation of the reasons for using confidence intervals is followed by detailed presentation of methods of calculation, including numerous worked examples and specially compiled tables. To make things even easier, a computer programme, Confidence Interval Analysis (CIA), for calculating confidence intervals has been specially designed by Martin Gardner and details are available from the Publishing Department, British Medical Journal.
An essential handbook for everybody using statistical methods to present their findings (and that means most doctors). Statistics with Confidence can also be applied to other disciplines—such as engineering, agriculture, and the social sciences.
Price: Inland £7.95; Abroad £9.50
BMA Members: Inland £7.45; Abroad £9.00
including postage, by air abroad

The Journal of Medicine and Philosophy

Sponsored by the Center for Ethics, Medicine, and Public Issues, a joint project of Baylor College of Medicine, the Institute of Religion, and Rice University, in collaboration with the School of Medicine, University of Connecticut Health Center

Editor
H. Tristram Engelhardt, Jr., Center for Ethics, Medicine, and Public Issues, Baylor College of Medicine, Houston, USA

Associate Editor
Stuart F. Spicker, School of Medicine, University of Connecticut Health Center, Farmington, USA

The Journal of Medicine and Philosophy continues to explore the shared themes and concerns of philosophy and the medical sciences. Not since Galen’s time has the contact between medicine and philosophy been so widespread; the journal seeks to meet the challenge of this dialogue by providing a forum for philosophers, medical practitioners, educationists, and humanists to examine the problems and controversies stimulated by the engagement of these two disciplines.

The range of issues having philosophical import for medical research and practice is enormous. New developments in medical technology and expertise frequently create scientific and humanistic dilemmas, and medical decision-making always involves philosophical presuppositions. Moreover, the concerns of philosophy often converge with those of medicine, as philosophers attempt to understand the nature of knowledge and the human condition. The purpose of the journal is to analyze this multifaceted relationship and to raise its discussion to a responsible and intellectually rigorous level.
