

Many medical journals, including the *British Medical Journal*, now expect scientific papers submitted to them to contain confidence intervals when appropriate. Why? what are they? and how do you calculate them? *Statistics with Confidence* tells you. A clear explanation of the reasons for using confidence intervals is followed by detailed presentation of methods of calculation, including numerous worked examples and specially compiled tables. To make things even easier, a computer programme, Confidence Interval Analysis (CIA), for calculating confidence intervals, has been specially designed by Martin Gardner and details are available from the Publishing Department, *British Medical Journal* (or the American College of Physicians).

Eighth edition

The statistical testing of data is indispensable in many types of medical investigation and a help on countless occasions in clinical practice. This book provides step by step instruction. Subjects covered include standard deviation, χ^2 tests, t tests, non-parametric tests, and correlation. The book includes sections on Fisher's exact probability test and rank correlation not published in the original *BMJ* series. Methods specially adapted to pocket calculators.

Fourth impression

No doctor can afford to ignore statistics: most modern medical research uses statistics. This important and authoritative book provides clear information on designing studies, applying statistical techniques, and interpreting studies that use statistics. It can be easily understood by those with no statistical training and should be read by all those who want to keep abreast of new developments.

Second edition

Epidemiology has its own techniques of data collection and interpretation and its necessary jargon of technical terms, and in *Epidemiology for the Uninitiated* Professors Geoffrey Rose and David Barker guide the novice expertly through the theory and practical pitfalls. The second edition of this popular *BMJ* handbook has been revised to include further details of epidemiological methods and some of their more dramatic applications, such as the investigations on the Spanish cooking oil epidemic, and AIDS.

Theoretical Medicine

**An International Journal for the Philosophy and Methodology
of Medical Research and Practice**

Founding Editor

Kazem Sadegh-Zadeh, *Institute for Theory and History of
Medicine, University of Münster, FRG*

Editor-in-Chief

David Thomasma, *Loyola University, Stritch School of Me-
dicine, Maywood, USA*

Editor

B. Ingemar B. Lindahl, *Karolinska Institute, Dept. of Social
Medicine, Huddinge University Hospital, Sweden*

Theoretical Medicine provides a forum for interdisciplinary studies in the philosophy and methodology of medical practice and research. Matters of particular interest to the journal are the developments of the philosophy and methodology of clinical judgment and clinical decision making; the study of problems of medical language, of knowledge acquisition and of theory formation in medicine; the analysis of the structure and dynamics of medical hypotheses and theories; the discussion and clarification of basic medical concepts and issues; the application to medicine of advanced methods in the general philosophy of science, classical and non-classical logics, and mathematics; and the study of the interplay between medicine and other scientific or social institutions. Particular attention is paid to heuristic approaches in developing new methods and tools for the better analysis and understanding of the conceptual and ethical presuppositions of the medical sciences and health care processes.

Theoretical Medicine is an important communication medium in the area of the philosophy and methodology of medicine and, as such, offers comprehensive bibliographics, reviews of significant literature, information about current scholarly activities in the field, including partial proceedings of selected meetings, and an opinions section for readers' commentaries.
