**A Coursebook in Ethics for Doctors and Nurses**

**Alastair V. Campbell**

1975 Second Edition 224 pages illustrated £1.95

Since publication of the first edition of this book, interest in medical ethics has increased dramatically, both among medical personnel and the general public.

Much of the original section dealing with classical ethical theories has been retained. The section dealing with contemporary questions has been extensively revised, however, with a survey of such subjects as priorities in health care, decisions about life and death, the ethics of experimentation and the debate on abortion. The author presents alternative viewpoints on each issue, leaving the final value judgements to the reader. He writes in a clear non-technical style, with many examples drawn from actual clinical situations.
