

Unprecedented advances in medicine and genetic engineering have strained traditional moral principles. Here is the first systematic exposition of an ethics for the future.

GENETHICS

*Moral Issues in the
Creation of People*

■ BY DAVID HEYD

"The most sustained piece of writing I have yet seen on the foundations of population ethics. . . . A remarkable achievement."

—Partha Dasgupta, University of Cambridge

How is no longer a problem — but there's still which and why

The microcomputer revolution has made powerful machines and highly complex programs generally available. This means that users of statistical techniques need no longer be concerned with the arithmetical and algebraic details — the software will take care of all that. What is vital, however, is to understand the ideas and the basic principles of statistical analysis. In *Medical Statistics on Microcomputers* R A Brown and J Swanson Beck show how to get the best use out of microcomputers when analysing data, particularly in the pathology laboratory. They explain the rational basis of various widely applicable statistical methods and also indicate their limitations so that you can make an informed choice. Chapters include:

- Data handling
- Analysis of data from one or two groups
- Comparison of several groups
- Analysis of categorical data
- Statistical methods for diagnostic tests.

Available from: BRITISH MEDICAL JOURNAL, PO BOX 295, LONDON WC1H 9TE, any leading bookseller or the BMJ/BMA bookshop in BMA House.

JOURNAL OF APPLIED PHILOSOPHY

Journal of the Society for Applied Philosophy

Editors: **Stephen Clark and Brenda Almond**, *Department of Philosophy, University of Liverpool, P.O. Box 147, Liverpool L69 3BX, UK*

Journal of Applied Philosophy aims to provide a focus for philosophical research with a direct bearing on areas of practical concern which are capable of being illuminated by the critical analytic approach characteristic of philosophy, and by direct consideration of questions of value. These areas include law, politics, economics, science policy, medicine and education, but are not confined to these. The journal aims to foster and promote philosophical work which is intended to make a constructive contribution to problems in these areas and to the identification, justification and discussion of values capable of transcending narrow or local interests.

Recently published articles include:

Speaking about the Unspeakable: genocide and philosophy. **Michael Freeman**

Is there an Ethics of Computing? **Geoffrey Brown**

For One Concept of Liberty. **Rodger Beehler**

Moral Responsibility, Psychiatric Disorders and Duress. **Carl Elliott**

The Market for Bodily Parts: a response to Ruth Chadwick. **G. V. Tadd**

Rights-talk Will Not Sort Out Child-abuse: comment on Archard on parental rights. **Mary Midgley**

On Primoratz's Definition of Terrorism. **Walter Sinnott-Armstrong**

Letting in the Jungle. **Michael F. Smith**

Putting Them Out on the Ice: curtailing care of the elderly. **Bernard Baumrin**

The Fallacy of all Person-denying Arguments for Abortion. **William Cooney**

Complexity and the Value of Lives—some philosophical dangers for mentally handicapped people. **Gavin J. Fairbairn**

Philosophical Counselling. **Shlomit C. Schuster**

Freedom and Respect in a Multicultural Society. **Fred Naylor**

1992 – Volume 9 (2 issues). ISSN 0264-3758.
