ABC of Brain Stem Death

SECOND EDITION

C Pallis and D Harley

This concise and accessible guide covers the important issues concerning brain stem death in a way that is relevant for practising clinicians. Now thoroughly revised and updated in line with current recommendations, the second edition contains new sections on recent concepts of death and organ donation.

ISBN 0 7279 0245 8

60 pages January 1996

UK £10.95; Overseas £13.00

(BMA members £9.95; £12.00)

Logic in Medicine

SECOND EDITION

Edited by Calbert I Phillips

Logic in Medicine brings together contributions by nine respected thinkers in medical logic, providing a rounded guide to this fundamental aspect of training and practice. It simply explains such concepts as deductive and inductive logic, and Bayes's theorem of pattern recognition. Illustrated with practical examples.

ISBN 0 7279 0854 4

232 pages 1995

UK £14.95; Overseas £17.00

(BMA members £13.95; £16.00)

Clinical Risk Management

Edited by Charles Vincent

This current major issue in health care is discussed in this comprehensive, internationally authored text by experts in risk management and leading clinicians in the most vulnerable specialties. It covers both the principles and the practical implementation of avoiding risk, and dealing with any claims that arise.

ISBN 0 7279 0947 9

588 pages January 1996

UK £34.95; Overseas £38.00

(BMA members £32.95; £36.00)

Doctors, Dilemmas, Decisions

Ben Essex

This first book on decision making in general practice provides, using over 220 real life cases, a logical system of analysing typical problems and producing practical, ethically acceptable solutions. It covers the full range, including diagnosis, management, goals, follow up, outcome, prevention, and practice organisation.
