

Bioethics

A Journal of the International Association of Bioethics

Edited by Peter Singer and Helga Kuhse

With the recent rapid advances in medical technology, the subject of bioethics has an ever increasing practical relevance for all those working in philosophy, medicine, law, sociology, public policy, education and related fields.

Bioethics provides a forum for well-argued articles on the ethical questions raised by current issues such as in vitro fertilization, abortion, euthanasia, AIDS, experimentation on embryos and genetic engineering.

New Dictionary of Medical Ethics

- A practical and thought-provoking introduction to the most important ethical issues in medicine today
- Contains over 700 concise entries, from short essays on major topics to brief definitions of key terms and concepts, contributed by today's outstanding practising clinicians and medical ethicists
- Covers subjects ranging from the doctor-patient relationship, confidentiality, health service management, and quality of life, to controversial issues such as abortion, AIDS, and euthanasia
- Explores a variety of different approaches and opinions, and provides extensive cross references for suggested further reading

An essential purchase for all health care workers, medical lawyers, students, and anyone with an interest in medical ethics

French National Consultative Ethics Committee for Health and Life Sciences

OPINIONS, RECOMMENDATIONS AND REPORTS 1984-1997

The mission of the French National Consultative Ethics Committee for Health and Life Sciences (CCNE) is to examine ethical issues raised by the progress of knowledge in the fields of biology, medicine and health. In fifteen years, it has released more than fifty opinions, reports and recommendations published in this book.

« Some of them arose as a response to the therapeutic revolution which concern medicine : recent advances in treatment, prevention of disease, epidemiology and clinical research. Some others deal with issues arising from the biological revolution which is about to give mankind mastery of reproduction, of heredity and of the nervous system, and which concerns society as a whole. »

(JEAN BERNARD, HONORARY CHAIRMAN OF THE CCNE)

« It seemed appropriate to circulate them to the English speaking community so that they contribute more effectively to the global democratic debate : scientific research knows no frontiers and ethical problems which it awakens increasingly concern humanity as a whole. » (JEAN-PIERRE CHANGEUX, CHAIRMAN OF THE CCNE)
