PHILOSOPHY AND MEDICINE 8

This collection of fifteen essays combines analyses of the fundamental philosophical and theological issues underlying different views of justice as an introduction to exploring these concerns with respect to health care. These basic philosophical and historical essays are then followed by in-depth analyses of issues of macro-allocation and micro-allocation of health care resources. For the student, the essays offer a wide-ranging consideration of issues in health care with special attention to prenatal life, the defective newborn, and the dying. Problems of cost containment, justice in human research, and claims of future generations are examined along with analyses of the fundamental issues of justice that underlie health care policies. For the scholar, the volume offers a set of new analyses of the crucial concepts underlying current debates with regard to health care policy.
